

HTML LESSON 1

Here is where your presentation begins

BASIC TO DO WEBSITE

01

HTML

02

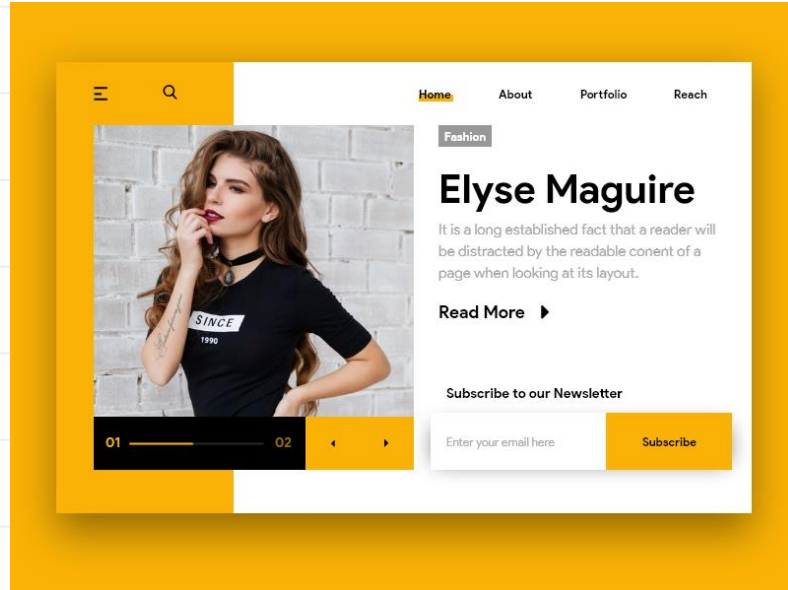

CSS

03

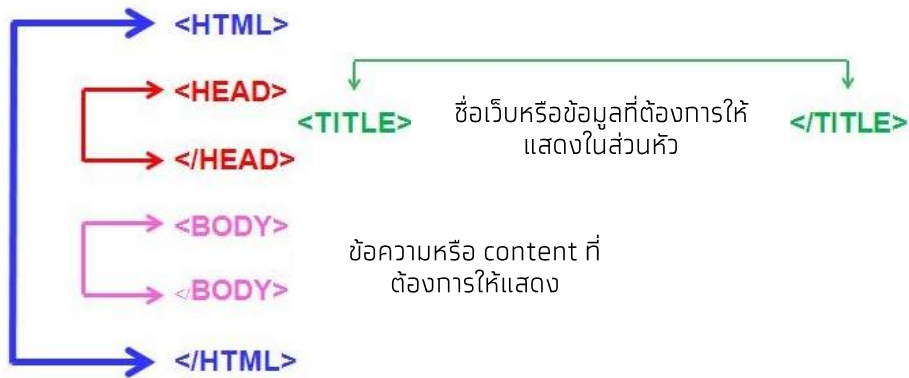

Javascript

HTML STRUCTURE

Main structure of html page

HTML STRUCTURE

HTML STRUCTURE

```
<html>
```

```
<head>
```

```
<title>Page title</title>
```

```
</head>
```

```
<body>
```

```
<h1>This is a heading</h1>
```

```
<p>This is a paragraph.</p>
```

```
<p>This is another paragraph.</p>
```

```
</body>
```

```
</html>
```

HTML BODY

HTML ELEMENT

The HTML element is everything from the start tag to the end tag

`<tagname>Content...</tagname>`

HTML ATTRIBUTE

- All HTML elements can have attributes
- Attributes provide additional information about elements
- `name="value"`

HTML ELEMENT AND ATTRIBUTE

Diagram illustrating an HTML element structure: `<p class="foo">This is a paragraph.</p>`

- Start tag:** `<p`
- Attribute:** `class`
- Value:** `"foo"`
- Content:** `This is a paragraph.`
- End tag:** `</p>`

```
<a href="https://www.w3schools.com">Visit W3Schools</a>
```

```

```

HTML HEADING

```
1 <h1>Heading level 1</h1>  
2 <h2>Heading level 2</h2>  
3 <h3>Heading level 3</h3>  
4 <h4>Heading level 4</h4>  
5 <h5>Heading level 5</h5>  
6 <h6>Heading level 6</h6>
```

Heading level 1

Heading level 2

Heading level 3

Heading level 4

Heading level 5

Heading level 6

HTML PARAGRAPH

Creating Line Breaks

The `
` tag is used to insert a line break on the web page.

Since the `
` is an [empty element](#), so there is no need of corresponding `</br>` tag.

```
1 <p>This is a paragraph <br> with line break.</p>  
2 <p>This is <br>another paragraph <br> with line breaks.</p>
```

[](#) for space

```
1 <p>This paragraph has multiple&nbsp;&nbsp;&nbsp;spaces.</p>  
2 <p>This paragraph has multiple<br><br>line<br><br><br>breaks.</p>
```

HTML LINKS

The target attribute tells the browser where to open the linked document. There are four defined targets, and each target name starts with an underscore(_) character:

_blank — Opens the linked document in a new window or tab.

_parent — Opens the linked document in the parent window.

_self — Opens the linked document in the same window or tab as the source document. This is the default, hence it is not necessary to explicitly specify this value.

_top — Opens the linked document in the full browser window.

```
1 <a href="/about-us.php" target="_top">About Us</a>
2 <a href="https://www.google.com/" target="_blank">Google</a>
3 <a href="images/sky.jpg" target="_parent">
4     
5 </a>
```

HTML TEXT FORMATTING

```
<!DOCTYPE html> <html lang="en">
<head>
  <title>Formatting Text in HTML</title>
</head>
<body>
  <p>This is <b>bold text</b>.</p>
  <p>This is <strong>strongly important text</strong>.</p>
  <p>This is <i>italic text</i>.</p> <p>This is <em>emphasized text</em>.</p>
  <p>This is <mark>highlighted text</mark>.</p>
  <p>This is <code>computer code</code>.</p>
  <p>This is <small>smaller text</small>.</p>
  <p>This is <sub>subscript</sub> and <sup>superscript</sup> text.</p>
  <p>This is <del>deleted text</del>.</p>
  <p>This is <ins>inserted text</ins>.</p><p>This is <b>bold text</b>.</p>
</body>
</html>
```

This is **bold text**.

This is **strongly important text**.

This is *italic text*.

This is *emphasized text*.

This is highlighted text.

This is computer code.

This is smaller text.

This is subscript and superscript text.

This is ~~deleted text~~.

This is inserted text.

This is **bold text**.

HTML TEXT FORMATTING (ADDRESS)

```
1 <address>  
2 Mozilla Foundation<br>  
3 331 E. Evelyn Avenue<br>  
4 Mountain View, CA 94041, USA  
5 </address>
```

Mozilla Foundation
331 E. Evelyn Avenue
Mountain View, CA 94041, USA

HTML STYLES

01

Inline styles

Using the style attribute in the HTML start tag.

02

Embedded styles

Using the <style> element in the head section of the document.

03

External style sheet

Using the <link> element, pointing to an external CSS files.

HTML INLINE STYLES

```
1 <h1 style="color:red; font-size:30px;">This is a heading</h1>  
2 <p style="color:green; font-size:18px;">This is a paragraph.</p>  
3 <div style="color:green; font-size:18px;">This is some text.</div>
```

HTML EMBEDDED STYLES

02

```
1 <head>
2   <style>
3     body { background-color: YellowGreen; }
4     h1 { color: blue; }
5     p { color: red; }
6   </style>
7 </head>
```

03

HTML EXTERNAL STYLES

```
1 <head>
2   <link rel="stylesheet" href="css/style.css">
3 </head>
```

```
1 <style>
2   @import url("css/style.css");
3   p {
4     color: blue;
5     font-size: 16px;
6   }
7 </style>
```

```
1 @import url("css/layout.css");
2 @import url("css/color.css");
3 body {
4   color: blue;
5   font-size: 14px;
6 }
```

HTML IMAGE

```
1   
2   
3 
```

can also use style in `` to specific width and height

```
1   
2   
3 
```

HTML5 PICTURE ELEMENT

Reducing the image dimension using the width and height attribute or property doesn't reduce the original file size. To address these problems HTML5 has introduced the <picture> tag that allows you to define multiple versions of an image to target different types of devices.

```
1 <picture>
2   <source media="(min-width: 1000px)" srcset="logo-large.png">
3   <source media="(max-width: 500px)" srcset="logo-small.png">
4   
5 </picture>
```

HTML TABLE

```
1 <table>
2   <thead>
3     <tr>
4       <th>Items</th>
5       <th>Expenditure</th>
6     </tr>
7   </thead>
8   <tbody>
9     <tr>
10      <td>Stationary</td>
11      <td>2,000</td>
12    </tr>
13    <tr>
14      <td>Furniture</td>
15      <td>10,000</td>
16    </tr>
17  </tbody>
18  <tfoot>
19    <tr>
20      <th>Total</th>
21      <td>12,000</td>
22    </tr>
23  </tfoot>
24 </table>
```

Items	Expenditure
Stationary	2,000
Furniture	10,000
Total	12,000

HTML LISTS

- **Unordered list** — Used to create a list of related items, in no particular order.
- **Ordered list** — Used to create a list of related items, in a specific order.
- **Description list** — Used to create a list of terms and their descriptions.

```
1 <ul>
2   <li>Chocolate Cake</li>
3   <li>Black Forest Cake</li>
4   <li>Pineapple Cake</li>
5 </ul>
```

- Chocolate Cake
- Black Forest Cake
- Pineapple Cake

```
1 <ol start="10">
2   <li>Mix ingredients</li>
3   <li>Bake in oven for an hour</li>
4   <li>Allow to stand for ten minutes</li>
5 </ol>
```

10. Mix ingredients
11. Bake in oven for an hour
12. Allow to stand for ten minutes

```
1 <dl>
2   <dt>Bread</dt>
3   <dd>A baked food made of flour.</dd>
4   <dt>Coffee</dt>
5   <dd>A drink made from roasted coffee beans.</dd>
6 </dl>
```

Bread
A baked food made of flour.

Coffee
A drink made from roasted coffee beans.

<dl> description list
<dt> description term
<dd> description definition

HTML FORM

Input element

- text
- password
- radio
- checkbox
- select box
- text area
- submit and reset button
- grouping form control

```
1 <form>
2   <label>Username: <input type="text"></label>
3   <label>Password: <input type="password"></label>
4   <input type="submit" value="Submit">
5 </form>
```

Username: Password:

*** การใช้ฟลัดข้อมูลใน form จะทำให้ง่ายต่อการส่งค่าไปจัดการ process ต่อ ในการ Add Update ข้อมูล Database*

HTML FORM

```
1 <form>
2   <label for="username">Username:</label>

4     <label>Email Address: <input type="email" name="email"></label>
5     <label>Phone Number: <input type="text" name="phone"></label>
6   </fieldset>
7 </form>
```

Contact Details

Email Address: Phone Number:

grouping form control

HTML IFRAME

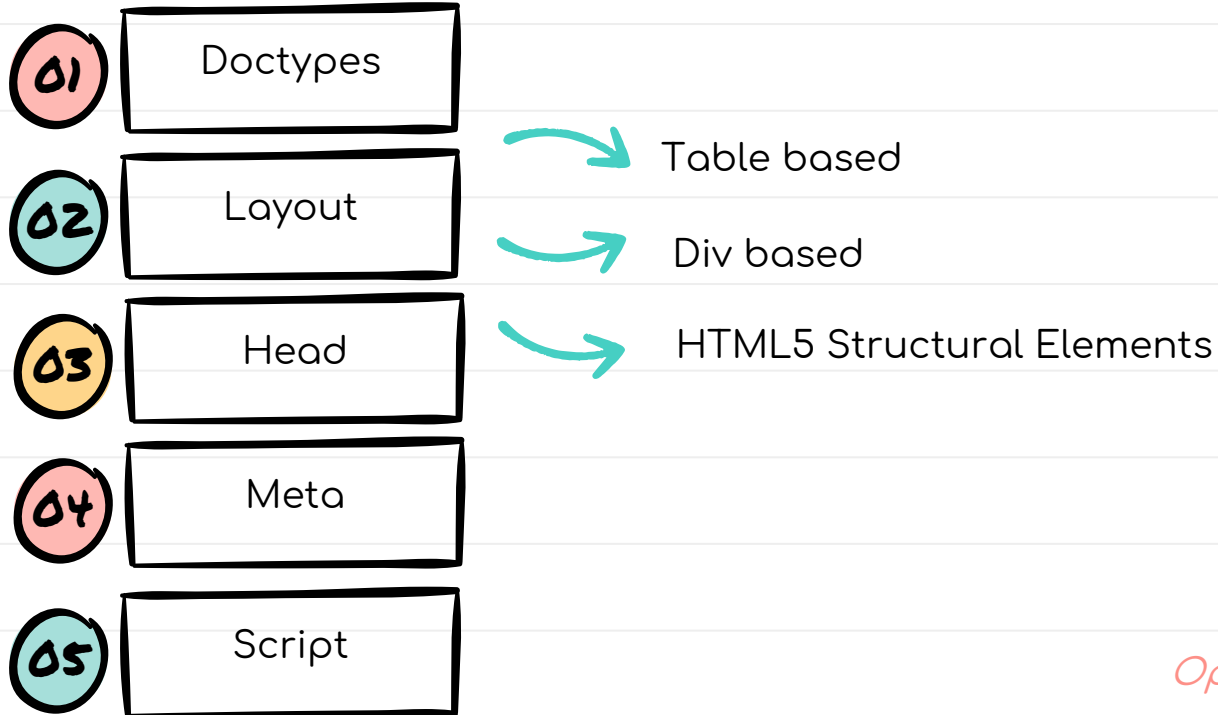

An iframe or inline frame is used to display external objects including other web pages within a web page. An iframe pretty much acts like a mini web browser within a web browser.

```
1 | <iframe src="hello.html" style="width: 400px; height: 200px;"></iframe>
```

Hello World

This HTML document is embedded inside the current document using an iframe.

HTML ADVANCED

Open Demo file

HTML LAYOUT

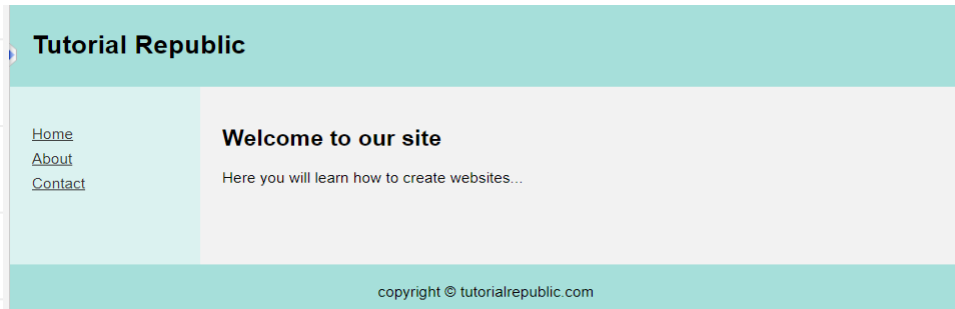

Table based

วางโครงสร้างเป็นตาราง เหมือนกับการสร้าง table

Div based

แบ่งเป็นส่วนๆ (division) ไว้ใน `<div>`

HTML5 Structural Elements

แบ่งเป็น `<header>`, `<footer>`, `<nav>`, `<section>`
